```java
package facebook;

public class BMW implements Car{

        @Override
        public void start() {
        System.out.println("Bmw--Started");
        }

        @Override
        public void stop() {
    System.out.println("Bmw--stopped");

        }

        @Override
        public void refuel() {
        System.out.println("Bmw--refueled");

        }
        //BMW class has its own method also ,this car will never share the
variable to anybody

        public void TheftSafety(){
                System.out.println("BMW--very safety");
                System.out.println("car is valid assret");
                System.out.println("car is valid");

        }

        public void message(){
        System.out.println("apple");
        }
        public void message(){
        System.out.println("orange");
        }

}
```
